DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

On page 2 of the specification, replace:

“United States Patent Application Serial Number 10/799,505, titled
“SIMPLE NOISE SUPPRESSION MODEL””

with:

-- United States Patent Application Serial Number 10/799,505, titled
“SIMPLE NOISE SUPPRESSION MODEL”, now US Patent 7,024,358 --

Allowable Subject Matter

2. Claims 1,2,5-8,11-16 are allowable over the prior art of record.
3. The following is a statement of reasons for the indication of allowable subject matter:

As per independent claims 1,7, 13, the claim limitations pertaining to using sliding windows to calculate energy samples from speech signals and performing certain pitch correlations based upon the energy calculated from the particular sliding window is not explicitly taught by the prior art of record.

Performing energy calculations in conjunction with determining pitch lag in the art of speech signal processing is well known. As an example, Unno et al (6453287) teaches a calculating pitch lag for a plurality of windows of a fixed sample size; selecting a target window of said plurality of windows by sliding the window until a predefined condition is satisfied, and compute optimum pitch correlation between said the target window and the window at a distant pitch lag (col. 6 lines 2-40). However, Unno et al (6453287) teaches the calculation of the pitch lag for each sliding window, and incorporating an energy determination (col. 7 lines 44-51). The claim scope of the independent claims calculates an energy distribution based on sliding windows and then calculating a pitch lag value dependent upon the energy distribution calculation. Furthermore, it would not have been obvious to one of ordinary skill in the art of speech signal processing to modify the teachings of the prior art of record to obtain the recited limitations of the independent claims, as noted above.
